**RE: Change in Lot Codes Food Systems Products**

Dear Customer,

Ingredion Incorporated uses lot coding for all products. A lot of product is a numerical identifier assigned to a specific quantity and represents the amount of product of a specific SKU continuously run. The lot sizes vary based on the product; the minimum is 50lbs.

Recently, the food systems business converted the ERP system to SAP. This conversion resulted in a change to the lot coding. Previously it was a 5-digit lot code and now it is an 8-digit lot code. Should you have any questions, please let us know.

See below for examples:
